HEALTHY HOMES FOR THE HOLIDAYS

The holiday season brings families, friends, *and* pollutants together. From chestnuts roasting on an open fire to decorations making an appearance from the attic, candles lighting every room, and meal preparation, all dramatically increase the pollutants in homes.

The holidays should revolve around family and friends, not poor indoor air quality or unsafe conditions, so check out these tips from Carrier to have a safer and healthier home for the holidays!

KIDDE™

Upgrade your home's fire and carbon monoxide detection to be fully integrated, Wi-Fi-enabled products - such as the Kidde Smoke + Carbon Monoxide Alarm with Indoor Air Quality Monitor.

52% of Americans do not own a carbon monoxide detector,* and as a deadly gas, it's imperative that each home is outfitted with the appropriate number of detectors and alarms.

Almost half of Americans don't own a fire extinguisher, but nearly 3/4 have made at least one common home health and safety mistake, such as leaving an open flame unattended.*

Preparation is key, and as you're baking that holiday ham or testing out the season's new candles, keep safety products on hand and easily accessible like the Kidde Multipurpose Home Fire Extinguisher.

Carrier

Monitor indoor air quality closely and take control of it!

Consider products like Carrier's Smart Room Air Purifier, which continuously samples incoming air, measures levels of pollution, and automatically adjusts between 18 fan speeds as needed all while integrating with smart home devices.¹

90% of Americans do not have an indoor air quality monitor,* and you can't resolve what you don't know. Get ahead of it so you can take informed steps to clean up the air for you and your loved ones this season!
