**IF YOU ANSWERED “NO” TO ANY QUESTIONS, YOUR HOME MAY NOT BE FIRE SAFE.**

For more information on fire safety and prevention, visit Kidde.com or NFPA.org.

Learn more about Kidde’s commitment to helping protect every moment for everyone at causeforalarm.org.
Three out of five home fire deaths take place in homes that did not have properly working smoke alarms. This is mostly due to dead or missing batteries, or the device has never been replaced and is expired. A smoke alarm, like any home appliance, should be updated and maintained.

**Take these steps to help protect your family:**

- You need working smoke alarms or detectors on every level of your home (including basement), in hallways, and both inside and outside every sleeping area.
- **Interconnected alarms** provide whole-home alarm activation. When one alarm sounds, they all do. So, if one goes off upstairs, you’ll hear it downstairs.
- **Test alarms weekly.** It’s easy, you usually just press the test button on its face, but consult the manual if you don’t know how or search online for your alarm’s manufacturer.
- **Replace smoke alarms** every ten years.
- **When the alarms sound,** get outside and stay outside. Call 9-1-1 once you’re out there.

For more information on fire safety and prevention, visit Kidde.com or NFPA.org.

Create an Escape Plan with your family

You may only have 2 minutes or less to escape a house fire once it starts.* And according to the Red Cross, only 26% of families have a fire escape plan in place. Take the time to make one – it can be a fun family activity!

- When escape planning, remember the twos:
  - Always know 2 ways out of every room,
  - Practice 2 times per year and
  - Practice 2 times of the day – daytime and nighttime

- Know who will assist children and those with mobility/health issues

- Have escape ladders in upstairs rooms

- Get Outside, Stay Outside: Remember, if the smoke or CO alarm sounds, get outside and stay outside

- Call 9-1-1: Make sure everyone in your house knows how to

The second way out is often a window

Two- and three-story escape ladders provide a quick and safe way for both adults and kids to get out if there are flames on the other side of the bedroom door.

Don’t forget Fur-Ever Friends

Teach everyone in the family what a smoke or carbon monoxide alarm sounds like and what to do if they hear one, which is: Get outside and call 9-1-1! You can even teach your dog how to respond to an alarm.

Results from a nationwide research study show that only one in three (34%) American households have more than one fire extinguisher. Having a fire extinguisher within reach can help to keep you and your family safe. Here are some tips:

- Only use your extinguisher after making sure:
  - all residents of the home have been evacuated
  - the fire department has been notified
  - there is a clear exit behind the person using the extinguisher
- Place a fire extinguisher within easy reach in rooms where fires are more likely to start such as the kitchen, living room and laundry room.
- Place a fire extinguisher in the bedroom for use in case you need to create a path to safety. Nearly half of all fatal fires occur during late night and early morning hours, when families are asleep.
- Choose a multipurpose extinguisher that is large enough to put out a small fire but not too heavy to handle.
- Learn to use a fire extinguisher properly.

How to use a Fire Extinguisher
Using a fire extinguisher is easy. Just remember the PASS system.

P Pull the pin. Hold unit upright.
A Aim at the base of the fire.
S Squeeze the handle.
S Sweep from side to side.

CARBON MONOXIDE SAFETY TIPS

Safety Made Simple

What you can do . . .

• Install at least one battery powered CO alarm or AC powered unit with battery backup on each level of your home and near sleeping areas.
• Have a licensed professional inspect the heating systems and other fuel-burning appliances in your home annually.
• Install fuel-burning appliances properly and operate them according to the manufacturer’s instructions.
• Have all fireplaces cleaned and inspected annually and keep chimneys clear of animal nests, leaves and residue.
• Do not block or seal shut the exhaust flues or ducts used by water heaters, ranges and clothes dryers.
• Do not leave your car running in an attached garage or carport.
• Be careful not to use ovens or stoves to heat your home.

Protect your family from “THE SILENT KILLER”

What is carbon monoxide (CO)?

Carbon monoxide is a colorless, odorless and tasteless poison gas that is produced by fuel-burning appliances such as furnaces, ovens, clothes dryers, water heaters, space heaters, fireplaces, charcoal or gas grills, and wood burning stoves.

If an appliance malfunctions or is improperly installed, CO can back up into the home, reaching dangerous levels and quickly cause injury or death.

What are the symptoms?

Initial symptoms are similar to the flu with no fever and can include dizziness, severe headache, nausea, sleepiness, fatigue / weakness and disorientation.

CO is often called the “silent killer” because it is odorless, tasteless and colorless. In fact its symptoms are often misdiagnosed and many people don’t know they are suffering from CO poisoning.

Carbon monoxide (CO) is the leading cause of accidental poisoning deaths in America. The use of carbon monoxide alarms could potentially prevent many of these deaths. Learn how to prevent CO poisoning in your family and how to spot the symptoms before tragedy occurs.

HOW TO MAKE A HOME FIRE SAFETY PLAN

- Draw a map of your home. Show all doors and windows.
- Visit each room. Find two ways out.
- All windows and doors should open easily. You should be able to use them to get outside.
- Make sure your home has smoke alarms. Push the test button to make sure each alarm is working.
- Pick a meeting place outside. It should be in front of your home. Everyone will meet at the meeting place.
- Make sure your house or building number can be seen from the street.
- Talk about your plan with everyone in your home.
- Make sure everyone in your home knows how to dial 911 or your local emergency number.
- Practice your home fire drill!
- Make your own home fire escape plan using the grid provided.
HOW TO MAKE A HOME SAFETY PLAN

DRAW A FLOOR PLAN OR A MAP OF YOUR HOME.

• Show all doors and windows.
• Mark two ways out of each room.
• Mark all of the smoke alarms with SA. Smoke alarms should be in each sleeping room, outside each sleeping area, and on every level of the home.
• Pick a family meeting place outside where everyone can meet.
• Remember, practice your plan at least twice a year!

Smoke Alarms

Three out of five home fire deaths take place in homes that did not have properly working smoke alarms.* This is mostly due to dead or missing batteries, or the device has never been replaced and is expired. A smoke alarm, like any home appliance, should be updated and maintained.

Take these steps to protect your family:

- You need working smoke alarms or detectors on every level of your home (including basement), in hallways, and both inside and outside every sleeping area.
- Interconnected alarms provide whole-home alarm activation. When one alarm sounds, they all do. So, if one goes off upstairs, you’ll hear it downstairs.
- Test alarms weekly. It’s easy, you usually just press the test button on its face, but consult the manual if you don’t know how or search online for your alarm’s manufacturer.
- Replace smoke alarms every ten years.
- When the alarms sound, get outside and stay outside. Call 9-1-1 once you’re out there.

Fire Extinguishers

Results from a nationwide research study show that only one in three (34%) American households have more than one fire extinguisher. Having a fire extinguisher within reach can help to keep you and your family safe. Here are some tips:

- Only use your extinguisher after making sure:
  - all residents of the home have been evacuated
  - the fire department has been notified
  - there is a clear exit behind the person using the extinguisher
- Place a fire extinguisher within easy reach in rooms where fires are more likely to start such as the kitchen, living room and laundry room.
- Place a fire extinguisher in the bedroom for use in case you need to create a path to safety. Nearly half of all fatal fires occur during late night and early morning hours, when families are asleep.
- Choose a multipurpose extinguisher that is large enough to put out a small fire but not too heavy to handle.
- Learn to use a fire extinguisher properly.

Other Fire Safety Tips

- Make sure everyone in your home knows how to call 9-1-1 in case of fire or emergency.
- Practice a home fire escape plan regularly with the entire family. Practice during the day and night. Be aware of who may not wake to the sound of an alarm and assign an adult to assist that person during an emergency.
- Be safe if you smoke by dousing cigarette and cigar butts with water before dumping them.
- Use caution not to overload electrical outlets, extension cords and power strips. Check all wires and cords for damage regularly.
